

Get rid of all complicated configurations, setup scripts and maintenance for keeping your key/value data!

Serving 2M+ key/value pairs and it is free!

## FEATURES

- **Configuration Free:** Forget millions of configurations to store just key/value pairs.
- **Ready to Ship:** Test and ship your application with the same key/value store.
- **Free Forever:** Values are stored forever as long as they are updated once within a week.
- **Developer Oriented:** Designed by considering the development process.

## SAMPLE USE CASES

Some very popular use cases of KVaaS are as follows and the rest depends on your imagination:

- **Distribute Configuration:** Manage the configuration of distributed applications.
- **Synchronize Applications:** Mutex for distributed applications in the cloud.
- **Collect Statistics:** Gather metrics from distributed applications.
- **Service Discovery:** Discover where your applications are running.

## REST API

KVaaS presents a cloud key/value store service with REST API. This enables you to create and manage all your key/value data from any programming language and client.

```
keyvalue.xyz@terminal
$ # Get a new key
$ curl -X POST https://api.keyvalue.xyz/new/myKey
$ https://api.keyvalue.xyz/c98ab8e0/myKey
$
$ # Set value
$ curl -X POST https://api.keyvalue.xyz/c98ab8e0/myKey/myValue
$
$ # Get value
$ curl https://api.keyvalue.xyz/c98ab8e0/myKey
$ myValue
```

## ENTERPRISE SUPPORT

If you need more flexible and dynamic key/value store for coordination, notification, feature flagging and more in your cluster, please contact us to tailor your solution.
